

# The prospects for the development of new energy storage

What is the future of energy storage study?

Foreword and acknowledgments The Future of Energy Storage study is the ninth in the MIT Energy Initiative's Future of series, which aims to shed light on a range of complex and vital issues involving

How to develop and expand energy storage technology?

The development and expansion of energy storage technology not only depend on the improvement in storage characteristics, operational control and management strategy, but also requires the cost reduction and the supports from long-term, positive stable market and policy to guide and support the healthy development of energy storage industry.

How has energy storage technology changed in recent years?

In recent years, both engineering and academic research have grown at a rapid pace, which lead to many achievements. Due to rapid development of energy storage technology, the research and demonstration of energy storage are expanding from small-scale towards large-scale.

How energy storage technology is advancing industrial development?

Due to rapid development of energy storage technology, the research and demonstration of energy storage are expanding from small-scale towards large-scale. United States, Japan, the European Union have proposed a series of policies for applications of energy storage technology to promote and support industrial development [12 - 16].

Is energy storage a new technology?

Energy storage is not a new technology. The earliest gravity-based pumped storage system was developed in Switzerland in 1907 and has since been widely applied globally. However, from an industry perspective, energy storage is still in its early stages of development.

Why should we invest in energy storage technologies?

Investing in research and development for better energy storage technologies is essential to reduce our reliance on fossil fuels, reduce emissions, and create a more resilient energy system. Energy storage technologies will be crucial in building a safe energy future if the correct investments are made.
