

There is no wind in my hometown but I still built a wind farm

Would you like a wind turbine in your local community?

The energy provider Octopus runs a similar scheme. It says that 91% of customers surveyed said they would like a wind turbine in their local community if it meant cheaper electricity.

Are windmills a myth or a misconception?

Wind power has a long history. Back in 900 B.C., the Persians were using windmills to pump water and grind grain, writes the Department of Energy. Still, the windmill's use in generating electricity has produced some incredible myths and misconceptions. Here are a couple of the biggies, along with one big truth:

How many homes can a wind farm power?

Today the wind farm produces enough green energy to power around 7,000 homes. Image: Good Energy They decided to install 10 Danish-built, 400 kW turbines. "There were no consultancies or anything, even for the layout for the wind farm and things like that," recalls Martin.

How did the Delabole wind farm become a tourist attraction?

Inspired by the idea of generating power on the farm, Peter arranged a visit to Denmark, then a world leader in wind turbines. In an unusual twist, the Delabole wind farm became something of a tourist attraction. Image: Good Energy "There were literally hundreds of manufacturers at that point.

Can wind be generated all day and night?

Wind can be generated all day and night, unlike solar energy, but it is difficult to predict. For example, the UK generated 14% less wind in 2021 than in 2020, despite having 4.4% more capacity. For this reason, the government has said the UK will continue to use gas and nuclear to provide a more constant supply to fill any gaps.

Can wind farms slow down the wind?

At large scale, slowing down the wind by using its energy to turn turbines has environmental consequences. A group of researchers at Princeton University found that wind farms may change the mixing of air near the surface, drying the soil near the site.
