What is the bottom-up cost model for battery energy storage systems?

Current costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Feldman et al.,2021). The bottom-up BESS model accounts for major components,including the LIB pack,inverter,and the balance of system (BOS) needed for the installation.

What are the different types of battery storage?

Utility-scale storage capacity ranges from several megawatt-hours to hundreds. Lithium-ion batteries are the most prevalent and mature type. Battery storage increases flexibility in power systems, enabling optimal use of variable electricity sources like solar photovoltaic (PV) and wind energy.
