What is the future of energy in Tunisia?

In Tunisia, electricity is produced almost exclusively by burning natural gas, more than half of which is imported. This dependence poses a threat to energy security and is a strain on the national budget. At the same time, energy efficiency (EnEff) and renewable energy (RE) have enormous potential in Tunisia.

How will the Tunisian energy transition work?

The Tunisian energy transition can take multiple trajectories. In the business-as-usual scenario, large-scale projects, heavily led by foreign private companies will continue dominating the renewable energy landscape. Resistance from trade union workers and local communities will multiply, hindering the transition to clean renewable energy sources.

Is biomass a source of electricity in Tunisia?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Tunisia: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What are Tunisia's Nationally Determined Contributions (NDCs)?

Tunisia also placed its energy sector at the heart of its updated Nationally Determined Contributions (NDCs), where 73% of GHG reductions are planned to occur through a mixture of energy efficient measures and scaling up on renewable energy.

How does neoliberalism affect the energy sector in Tunisia?

Two main narratives are currently influencing decisions in the Tunisian energy sector. The first dominant discourse draws on neoliberal practices of green extractivism, where natural resources are exploited for export purposes, whereas the second opposing discourse calls for justice, democracy, and community ownership of energy projects.

Does Tunisia still produce electricity?

Electricity production in Tunisia remains heavily reliant on natural gas, which makes up 97% of the sector's capacity, the majority of which is imported from Algeria, or received as royalty. Declining domestic gas production now only makes up 38% of the electricity production mix.

Our guarantees in middle-income countries will accelerate their green transition to a clean and sustainable energy future," said Hiroshi Matano, MIGA Executive Vice President. "We are excited to collaborate with the private sector in Tunisia to significantly increase its share of renewable energy for a prosperous future. The project will help meet the ...

Tunisia: Many of us want an overview of how much energy our country consumes, where it comes from, and

if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. ... Tunisia: Energy intensity: how much energy does it use ...

Renewable energy offers Tunisia an opportunity to stabilize its economy. By reducing its dependence on imported fossil fuels, Tunisia can protect itself from the energy import costs that strain national finances. For instance, in 2022, Tunisia imported approximately 48% of its energy needs, primarily through natural gas, according to the World ...

Through June 2023, Tunisia had about 565 MW of installed renewable energy capacity of which 240 MW was wind power, 263 MW solar power, and 62 MW of hydroelectric power, representing a combined 8% of national energy production capacity. The GOT aims to raise the usage of renewable energy resources to 35% of total power capacity by 2030. Green ...

Renewable heat. Renewables also have an important role in providing heat for buildings and industrial processes. To achieve decarbonisation and energy saving objectives, many countries are encouraging individual homes and buildings to shift from fossil fuel heating systems such as gas- or oil-fired boilers to systems like heat pumps which are much more efficient and can be ...

In 2019 Carlyle's Renewable and Sustainable Energy Platform led a \$100 million commitment to partner with Alchemy Renewable Energy on a newly-established company, Cardinal Renewables, to develop, acquire, finance and operate ...

Renewable energy development strategy in Tunisia. Home &gt; Renewable energy development strategy in Tunisia. Since its creation in 1985, the National Agency for Energy Conservation has carried out two strategic studies for the development of renewable energies, one in the early 1990s and the second in the early 2000s. ...

Investment to support Tunisia's energy security and green transition and cut CO2 emissions The European Bank for Reconstruction and Development (EBRD) and the French development agency, Proparco, are promoting the green transition of Tunisia by financing the construction and operation of two solar photovoltaic power plants in the areas of ...

Tunisia has set itself the ambitious goal of generating about a third of its energy demand from renewable sources by the year 2030. Currently, the country's energy production is almost exclusively derived from fossil fuels, ...

**Renewable Energy Industry in Tunisia: Challenges and Opportunities** The demand for energy in Tunisia has been steadily growing over the last decade due to socio-economic development and energy subsidies from the government. In 2000, the country reached its energy balance equilibrium and by 2010, the energy need has grown to the oil equivalent of ...

Tunisia aims to increase renewable energy production to 35 percent by 2030. Currently, about 94 percent of the country's power generation comes from gas-fired power plants, with gas imported from Algeria. The projects are expected to reduce Tunisia's exposure to gas price volatility and exchange rate fluctuations, easing the fiscal burden ...

Tunisia is making remarkable progress in its transition to renewable energy, with a strong focus on solar, wind, and biomass sources. The country is determined to diversify its energy mix and reduce its reliance on fossil fuels, setting an ambitious goal to generate 35% of its electricity from renewables by 2030.

The country has adopted an energy transition strategy that will allow primary energy demand to decrease by some 30 per cent and to generate 35 per cent of its electricity from RE by 2030. In addition, greenhouse gas emissions are to ...

Tunisia is among the developing countries that have taken initiatives to develop renewable energy and strengthen energy efficiency. Moreover, it has considerable potential, especially in the field of wind and solar energy. However, the country is still dependent on fossil fuel energy. In this context, the transition to renewable energy is considered one of the ...

Alchemy Renewable Energy is an industry leader in renewable energy projects as well as comprehensive long-term debt and tax equity financing. The firm utilizes a credentialed team, a strong network of joint ventures, and parent company Monarch Private Capital to support premium mid-size utility-scale renewable energy projects, including solar and biomass power generation.

The Secretary emphasised that energy transition remains a top priority for Tunisia, which aims to generate 35% of its electricity from renewable sources by 2030 and 50% by 2050. He also noted that the country plans to reduce its carbon intensity by 46%. In addition, the country also announced the launch of three tenders for installing 1,700 megawatts as part ...

Orrick has advised Alchemy Renewable Energy on its partnership with global investment firm Carlyle Group. Carlyle, through its newly-established affiliate Cardinal Renewables, has made a \$100 million commitment to partner with Alchemy to develop, acquire, finance and operate solar power generation projects throughout the United States.

Alchemy was established in 2016 and since then has taken part in the development, construction and operation of over 850 MW of renewable energy projects. It currently has 38 projects in development or operation across eight states. Carlyle said that equity capital for the transaction comes from its Renewable & Sustainable Energy Fund.

Traditionally, carbon black has been used as a reinforcing agent in tires. Today, because of its unique properties, the uses of carbon black have expanded to include pigmentation, ultraviolet (UV) stabilization and conductive agents in a variety of everyday and specialty high performance products, including: Tires and Industrial Rubber Products, Plastics, Electrostatic Discharge ...

Tunisia is making significant strides in embracing renewable energy (RE) sources such as solar, wind, and biomass, aiming to diversify its energy mix and reduce its dependence on fossil fuels. The nation has set an ambitious goal: to generate 35% of its electricity from renewables by 2030.

Award: Business advisory service from Ernst and Young and \$40,000 Grant Award Duration: October 2019-July 2020 Lead Person: Seth K. Quansah Telephone: 0272051157 | 0201748465 Email: squansah@rad-aid Location: Prampram, Greater Accra, Ghana

POWER TUNISIA. A Private Sector Program for Energy Transition in Tunisia. In 2022, 98.1% of Tunisia's electricity was derived from natural gas, two-thirds of which was imported from Algeria, making Tunisia especially vulnerable to the volatility of international oil and gas price shocks.

a) The Tunisian Solar Plan: a renewal of the trend towards dependency as strategic orientation In 2015, 7 Tunisia launched the updated version of the Tunisian Solar Plan (its French acronym is PST), an operational plan that sits within the country's energy transition strategy. The plan was originally published in 2009 and aims to increase the ratio of renewable ...

Atlanta, May 29, 2019 - Alchemy Renewable Energy (ARE), a high growth portfolio company of Monarch Private Capital that owns and operates renewable energy facilities, today announced the commercial operation of the 3.5 MWac Ephrata Solar photovoltaic project, located in Lancaster County, Pennsylvania. In 2017 the Borough of Ephrata selected TurningPoint Energy as the ...
