How much power can a turbo power system deliver?

The chargers can be scaled up to deliver 480kW of power per vehicle, which means they can be used by electric heavy goods vehicles and Turbo Power Systems has ambitions to double the output to 1MW of power. Initial small volumes of the products will go into production at the firm's Team Valley premises this summer.

Ontic, a worldwide leader in supplying and licensing established aircraft parts and services for over 45 years, is pleased to announce an acquisition from Turbo Power Systems (TPS) of the Override Jettison Fuel Control (OJ) to supply a global power management company. The "OJ" goes into the fuel system for the Boeing 787.

About Turbo Power Systems TPS is a world class specialist supplier of innovative power and energy conversion solutions for Transportation, Energy, Industrial and Defence markets. ... USA, with offices in California and Ireland. PRESS RELEASE October 2019 - TPS win contract to supply permanent magnetic generators to Anax Holdings LLC. Turbo ...

Mission: To provide the worldwide turboprop and turbo-shaft aviation community value added repair, and overhaul services through our tailored cost effective, expedient and consistent solutions. Culture: We each bring our own skill set and unique perspective to a project, but we work as a tight-knit team. Our success, meaning your safety, depends on this collaboration.

Gateshead's Turbo Power Systems, which supplies the rail, road and industrial sectors, has started production of ultra rapid EV chargers suited to commercial vehicle users. The firm says its tech will be targeted at ...

We are a leading designer and manufacturer of cutting-edge power conversion systems with applications for industry, transport and energy. We design and manufacture everything in-house at our 55,000sqft facility in Gateshead, shipping our products worldwide.

All of our high speed permanent magnet machines are designed with power ratings up to multi MW and speeds up to 160,000 rpm. Our machines have a varied range of applications, most commonly they are designed to run industrial compressors, oil and gas compressors, HVAC compressors, laser and fuel cell cooling systems.

As early as 2016, we began to understand the power of bi-directional DC-DC charging and the impact it could have on overcoming the steep de-carbonisation challenge. Our 40 plus years developing world-leading power systems for the rail and aerospace industries armed us with the technology to enable it. But it went way beyond creating rapid chargers.

With over 40 years experience in Power Electronics and High-Speed Electrical Machine design, development, test and manufacture, we remain at the very forefront of the clean technology industry, having delivered over 25,000 systems totalling more than 3.2GW of capacity worldwide. ... we remain at the very forefront of the clean technology ...

The project consortium brings together renewable energy experts 3ti with advanced EV power solutions provider Turbo Power Systems (TPS), smart energy company GridBeyond, and EV & decarbonisation experts Cenex, in a 17-month collaboration to deliver a state-of-the art system, including a six-month real-world demonstration.
