

Why should Singapore companies invest in Urban Solutions & infrastructure?

These include investments into roads, airports, seaports, irrigation, water, energy, and waste management projects. This presents huge opportunities for Singapore companies to offer their expertise and meet the urban solutions and infrastructure demand in the market.

How Singapore companies have developed innovative urban solutions?

In Singapore, companies have developed innovative urban solutions in areas ranging from green buildings to transportation and agricultural solutions. Green buildings, eco-friendly modes of transportation and upgraded agricultural solutions are among the developed urban improvements Singapore companies in this industry have to offer.

Why should you attend Urban Solutions events in Singapore?

Since then, Singapore has undergone a complete transformation and now attracts a steady stream of city planners from countries and regions such as China, Southeast Asia, South America and Africa who come to learn about urban governance and planning for the city of tomorrow. Why Hold Urban Solutions Events in Singapore?

What are Singapore's Green Energy plans for Vietnam?

It is committed to tap more renewable energy, such as wind and solar as well as LNG, and reducing reliance on traditional energy sources such as coal. Singapore companies such as Sunseap, The Blue Circle, Pavilion Energy and Sembcorp have been developing green energy projects in Vietnam.

How do we support industrialisation and urbanisation?

With strong government support, we use our integrated capabilities to fast-track industrialisation and urbanisation, creating economic engines that support growth for the long term. Click the links below to find out more:

Energy resilience is a strand of resilience that is not well-studied in the urban studies literature [36]. Of those studies addressing urban energy, only a few have discussed ...

o Singapore imports most of its building materials highly susceptible to supply chain disruptions. o To develop innovative solutions to address tightening resource constraints, ageing ...

Sembcorp has more than 30 years of track record delivering essential and innovative solutions to customers and communities. Our integrated urban solutions promote resilient cities that thrive on efficient and innovative use of energy solutions, water resources, and smart waste and waste-to-resource management.

The FI provides core fundings to the Solar Energy Research Institute of Singapore and Energy Research

Institute @ NTU, which support the four supply switches for Power Sector Decarbonisation (viz. Solar, Regional Power Grids, Low-Carbon Alternatives, and Natural Gas).

To mitigate the effects of climate change, we have to ensure that our buildings are highly energy efficient. We have designed and built Green Buildings, leveraging on innovative and ...

Using green urban solutions to achieve production of safe, fresh and delicious vegetables, using minimal land, water and energy resources. Sky Greens is the innovation hub of its holding company, Sky Urban Solutions Holding Pte Ltd, ...

As part of the initiative to achieve Singapore's Green Plan 2030, we propose to investigate the potential of utilizing micro-pumped hydroelectric energy storage (PHES) systems in multi-level carparks (MLCP: a stacked car ...

o Singapore imports most of its building materials highly susceptible to supply chain disruptions. o To develop innovative solutions to address tightening resource constraints, ageing infrastructure, greater densification and climate change, for a liveable, sustainable and resilient city.

How can we help you? Infrastructure Systems Cluster (ISC) conducts fundamental and applied research led by real needs of sustainable urban infrastructure systems, and translates the ...

An example of our clean energy efforts can be seen through our pilot project to transform the resort island of Sentosa to be carbon-neutral by 2030. Among the solutions that will be employed include smart infrastructure that can detect and analyse energy usage patterns.

The research scopes include design, test-bedding and optimisation of novel urban PV concepts through the integration of existing infrastructures with PV, for example overarching of carparks, roads, flood canals and "busy" rooftops.

Urban development balances the needs of economic and population growth with environmental and social concerns. As a leading urban master developer, Sembcorp has a proven track record in transforming raw land into sustainable urban developments in Asia.

To mitigate the effects of climate change, we have to ensure that our buildings are highly energy efficient. We have designed and built Green Buildings, leveraging on innovative and productive construction technologies. We aim to green 80% of our buildings by 2030.

An example of our clean energy efforts can be seen through our pilot project to transform the resort island of Sentosa to be carbon-neutral by 2030. Among the solutions that will be employed include smart infrastructure that can detect and ...
