In order to reduce the workload of plant personnel in LPSA model updating and improve the rationality of the LPSA results, this paper proposes an evidence-based reasoning approach to model the information processing process of plant personnel under specific abnormal condition of the plant, and synthesize it into LPSA model updating process.

The core of LPSA is a risk model of the plant which adequately reflects the current design and operational features (IAEA, 1999a). LPSA can also be defined in different ways such as a daily safety management system which is based on plant specific PSA and supporting information system.
