What are the statistics on electricity production in Venezuela?

Since 2009, there have been no official statistics on the electricity and energy sectors. Since the end of the 19th century, the production of electricity has been steadily growing in Venezuela. In between, there were some jolts due to prolonged droughts associated with the El Niño phenomenon.

Can Venezuela be a major alternative source of oil?

Venezuela, with its enormous untapped oil reserves, is the only country that can serve as a major alternative source of oil for China, India, and Germany. Caracas must seize this unique opportunity to spin its black gold into much-needed revenue. Despite its enormous oil reserves, Venezuela has so far been a minor factor in the global energy market.

Where do Venezuelan coal exports go?

Most coal exports go to Latin American countries, the United States, and Europe. The main coal company in Venezuela is Carbozulia, a former subsidiary of PdVSA, which is controlled by Venezuela's state development agency Corpozulia. The major coal-producing region in Venezuela is the Guasare Basin, which is located near the Colombian border.

How can Caracas ensure Venezuela's long-term economic future?

Consequently, if Caracas wants to ensure Venezuela's long-term economic future, then it must seek alternative export markets. Amidst this tectonic shift in the sources of energy demand, Venezuela is also facing an economic crisis triggered by the precipitous collapse in oil prices.
