

QatarEnergy announced in June 2023 that it had entered into a consortium to implement the Gas Growth Integrated Project in Iraq, with a 25% participating interest, together with TotalEnergies (45%) and Iraq's Basra Oil Company (30%).

Abstract: In this study scope, Iraq's area and solar power potential are searched and defined theoretically. It's created a set of data about annual electricity consumption in daily detail, and electricity consumption is simulated in a photovoltaic way.

Training centres, equipped with solar PV components and working systems, for practical, hands-on training, have been established in three different locations for empowering the Iraqi solar energy sector: Sulaymaniyah; Baghdad; Basra

Canada's Three Sixty Solar has announced the signing of a Memorandum of Understanding (MOU) for the sourcing, fabrication, implementation, and distribution of vertical solar tower systems within the Middle East, North Africa, and Turkey.

The facility, set to be located in the Basra region of Iraq, will feature 2 million high-efficiency bifacial solar panels mounted on single-axis trackers. The partners will develop the project in phases, aiming to commission them between 2025 and 2027, QatarEnergy said.

Mounted on single-axis trackers, these panels will deliver clean, renewable energy to approximately 350,000 homes in the Basra region, marking a significant stride in reducing the country's reliance on fossil fuels.

QatarEnergy and France's TotalEnergies have partnered to develop a 1.25 gigawatt (GW) solar power project in Iraq's Basra region, a venture set to become one of the world's largest solar installations.

This research calculates the seasonal optimum tilt angle of solar panels for 17 cities in Iraq and 83 cities in 83 countries distributed around the world. Solar Panel Angle Calculator program was used in calculating the optimum tilt angles from vertical.
