

What is the frequency regulation of energy storage system related to

Do energy storage systems provide frequency regulation services?

quency regulation services. However, modern power systems with high penetration levels of generation. Therefore, de-loading of renewable energy generations to provide frequency reg- ulation is not technically and economically viable. As such, energy storage systems, which support are the most suitable candidate to address these problems.

Why does frequency regulation need to be controlled at all levels?

Since hybrid generation systems such as PV systems and wind systems are becoming more prevalent within modern power systems, the risk of frequency imbalances will likely increase, and therefore frequency regulation needs to be controlled at all levels. The two-region interconnected power framework is displayed in Fig. 16.1.

What are energy storage systems used for?

The energy storage systems are used for controlling the frequency of the system[25]. To compensate for the mismatch of generation-load, an advanced energy storage system is proposed in the paper so that the nominal frequency of the power system is maintained.

How can a wind energy system control the frequency?

The frequency regulation can also be achieved in the wind energy system by using the battery storage[5] and the battery energy storage can be optimized for controlling the frequency [6]. The statcom integration with energy storage can give better results [7] and this can be achieved in the power system [8,9].

Why is frequency regulation important in energy systems?

Due to the very high penetration of energy systems, there is a need for frequency regulation, hence different control strategies are employed to overcome this problem.

Why is a coal-based energy storage system suited to high-frequency operation?

The coal-based system is restricted in its capacity to give the frequency control due to the limitation of the power ramp rate. Therefore, this advanced energy storage system is suited to high-frequency operation.
