How do I create a schematic diagram in Visio?

Use the Electrical Engineering drawing type in Visio Professional or Visio Plan 2 to create electrical and electronic schematic diagrams. On the File tab, select New, and then search for Engineering templates. Choose Metric Units or US Units, and then select Create. The template opens an unscaled drawing page in portrait orientation .

Do you use Visio for network diagrams?

There was a YouTuber that had some nice stencils, but when I politely asked for them, I got crickets. Seems making money is more important than sharing with fellow enthusiasts. I can do napkin and crayon, but I'd prefer to have something a little easier to read. I've used Visio extensively in the past for network diagrams.

Which CAD tool is best for solar PV?

DipTrace is probably the best of the free ones but is also not opensource so its free version has limits on pcb size and layers just like Eagle. I don't think its excellent schematic editor is limited though. All of the above are electrical schematic CAD tools combined with PCB design tools. None are designed for Solar PV .

Is there a way to build a solar PV system?

None are designed for Solar PV. They all have large libraries of components but these are PCB circuit components (passive components and ICs) they don't have large components like PV panels, breakers, inverters, etc. They do have component editors that allow you to draw your own components - so they could be adapted for that use.

The PV modules were a template already present in Visio. For the inverters, the square box with a diagonal line was an existing template. I added the signs for "DC" and "AC" by finding them in vectorial on Google images. The ...
