What is the design process of a wind turbine blade?

The design process of a wind turbine blade can be divided into two steps: aerodynamic design and structural design. The aerodynamic design consists in the selection of optimal geometry of the blade external surface (blade geometry), which is defined by the airfoil family and the distributions of chord, twist angle and thickness.

What are the aerodynamic design principles for a wind turbine blade?

The aerodynamic design principles for a modern wind turbine blade are detailed, including blade plan shape/quantity, aerofoil selection and optimal attack angles. A detailed review of design loads on wind turbine blades is offered, describing aerodynamic, gravitational, centrifugal, gyroscopic and operational conditions. 1.

Introduction

How did turbine blade design evolve?

Traditional blade designs, such as those found in early Darrieus and Savonius turbines, provided the foundation for further innovation and development. The evolution of blade design led to the emergence of more efficient and sophisticated designs seen in modern Horizontal Axis Wind Turbines (HAWTs) and Vertical Axis Wind Turbines (VAWTs).

Do wind turbines use horizontal axis rotors?

The review provides a complete picture of wind turbine blade design and shows the dominance of modern turbines almost exclusive use of horizontal axis rotors. The aerodynamic design principles for a modern wind turbine blade are detailed, including blade plan shape/quantity, aerofoil selection and optimal attack angles.

Can evolutionary algorithms improve wind turbine blade design?

The application of evolutionary algorithms to wind turbine blade design can be interesting, by reducing the number of aerodynamic-to-structural design loops in the conventional design process, hence reducing the design time and cost.

What were the first turbine blade designs?

The early blade designs, such as the Darrieus and Savonius turbines, were characterized by their simplicity but lacked efficiency and structural integrity. However, these initial designs laid the foundation for further research and development in blade design.
