The energy company Flexens has identified the opportunity to develop and build a society scale energy system based on renewable energy sources on Åland together with the island government- an island with ideal wind and solar conditions and an ambitious climate- and energy strategy with a population dedicated to sustainability.

Solar panels are naturally most efficient on sunny days because of the direct sunlight being harnessed. However, even during bad weather conditions, solar panels will still generate power as solar cells are usually powered by light and not heat. US-backed research has shown that high heat may actually cause solar panels to work less efficiently ...

Solar panels, also known as photovoltaics, capture energy from sunlight, while solar thermal systems use the heat from solar radiation for heating, cooling, and large-scale electrical generation. Let's explore these mechanisms, delve into solar's broad range of applications, and examine how the industry has grown in recent years.

The excellent conditions for wind and solar power as well as the island's existing endeavours in this regard and its self-contained energy market regulation contributed to Åland serving as the testbed, with a large service and transport sector as well as a ...

In combination with innovation, Åland's aspiration is to become a pioneer in green energy in the Nordic countries. Wind power already accounts for 90% of Åland's electricity production. The move toward even greater production of renewable energy through large-scale solar power farms and offshore wind farms is already well underway.
